

CLAIMS

1. An inhaler aid with a reed for a minute powdery  
curative medicine, comprising: a main unit constituted of a  
5 silicon rubber tube used to aid an inhaler for the minute  
powdery curative medicine, and a horn-shaped junction; an  
engagement portion which is provided at an upper portion of  
the main unit, and constituted of left and right  
projections comprising holding members at the end; and a  
10 reed fitted into a right side of the main unit;  
characterized in that when the inhaler aid is joined to a  
mouthpiece of the inhaler for the minute powdery curative  
medicine and an inhalation has been performed without fail,  
a sound is produced from the reed.
